

## 鉄道車軸用超音波手動検査装置

(可搬型手動車軸検査機器)

Portable manual axle inspection equipment for railway cars

## 検査対象品 / Inspection target

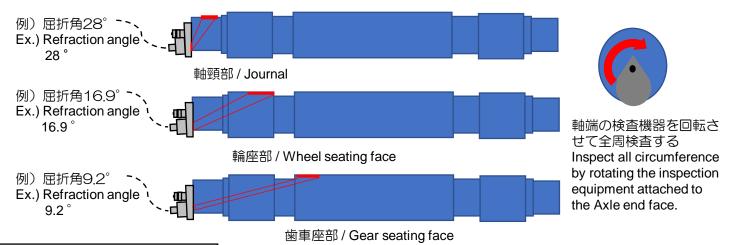

●鉄道車両の輪軸上・車軸上の表面キズ及び割れを手動検査する為の機器です。
A manual inspection equipment for inspects surface flows and cracks on the Wheel shaft and Axles of railway cars.

### 概要•特長/Features

- ●輪軸端/車軸端に検査機器を取付け回転させる事で軸頸部・輪座部・歯車座部の全周検査が可能です。

  By attaching the inspection equipment to the Wheel shaft end face or Axle end face and rotating the equipment, it is possible to All circumference inspections for the Journal, Wheel seating face, and Gear seating face.
- ●検査機器の屈折角を選択する事で軸頸部・輪座部・歯車座部の検査が可能になります。 By selecting the refraction angle, it is possible to inspect the Journal, Wheel seat, and Gear seat.

## 仕 様 / Specifications

- 車軸/輪軸検査機器:2MHz縦波探触子 + 一体型シュウ:Inspection equipment: 2MHz probe with Integrated shoe
- 検査部位毎に専用の検査機器が必要 : Dedicated inspection equipment is required for each inspection part.
- 屈折角指定し発注願います。納期3ヶ月:Please specify the refraction angle and place order. Lead time is 3 months.

共給品の範囲 / Scope of supply

車軸本体 Axle body

> Manual axle inspection equipment Probe + Shoe: Integrated product

車軸端面

Axle end face

カンダープン

Center pin グログ Shoe

Center hole カンダー穴

> 探触子 Probe

ビーム / Beam

•

equipment attached to the Inspect all circumference by rotating the inspection 軸端の検査機器を回転さ せて全周検査する

Axle end face.

検査機器を押し付ける。 車軸センター穴にセンターピンを挿入し、

させて車軸検査を行います。 (回 村) 検査機器を押し着けながら同心円上を移動 Select the inspection equipment suitable for the inspection target part based on the refraction angle.

Apply the coupling medium (machine oil) to the end face of the axle.

Insert the center pin into the center hole then press the axle inspection equipment against the end face. Axle inspection is performed by moving on concentric circles (rotating) while pressing the equipment.
