

Nr. R1-U1-6000  
September / 2015

Dear customers

Ryoden Shonan Electronics  
Corporation

## Discontinuation of production and sales of ultrasonic flaw detector UI-25.

Dear Sirs, thank you for your loyal patronage for our products.

Since the production of CPU and circuit parts has been discontinued, which are the main parts of UI-25, it has become difficult to continue production of UI-25. We are pleased to announce that production and sale of UI-25 will end at the end of September 2015.

We are selling UI-S7 $\alpha$  and UI-27 as successor models.

If you are planning to purchase or renew your flaw detector, please do not hesitate to contact us.

The maintenance of UI-25 will be available for repair for 7 years from the end of sales. However, if the defective part is discontinued and our stock is exhausted, it may not be possible to repair it.

Thank you for your understanding in advance.

Best regards.

Consultation desk for products.
